✦ Based on the search results, "butt joint" refers to a method of joining two pieces of material, most commonly wood or metal, by placing their ends directly against each other. Here's a breakdown:

- **Woodworking:**
 - A butt joint is the simplest type of wood joint.
 - It involves placing the end of one piece of wood against another.
 - While simple, it's generally considered a weak joint unless reinforced.
- **Welding:**
 - In welding, a butt joint involves joining two pieces of metal end-to-end in the same plane.
 - It's a common type of weld used in various fabrication processes.
- **Insulation:**
 - When dealing with insulation, a butt joint refers to the method of placing insulation materials end to end, to form a continuous layer of insulation.

Key points to remember:

- Butt joints are simple to create.
- They often require reinforcement for strength.
- They are used across multiple industries.

Unfortunately none of the provided URL's directly and specifically describe the term "Butt Joint". But, URL number 5, does talk about wood joints in general. So that would be the closest reference.
